

Protect your Pumps with Duromar® Coatings & Linings

BEFORE

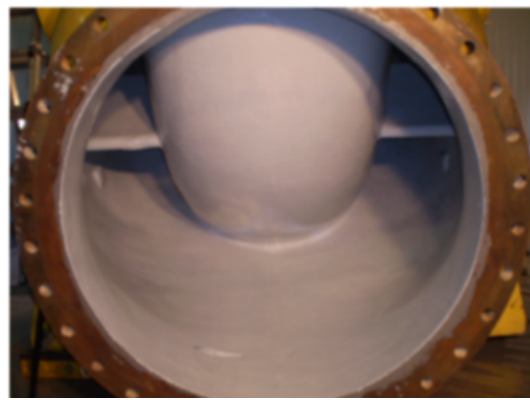

AFTER

Circulating Water Pumps when protected with **Duromar® SAR & Duromar® EAC-LV**

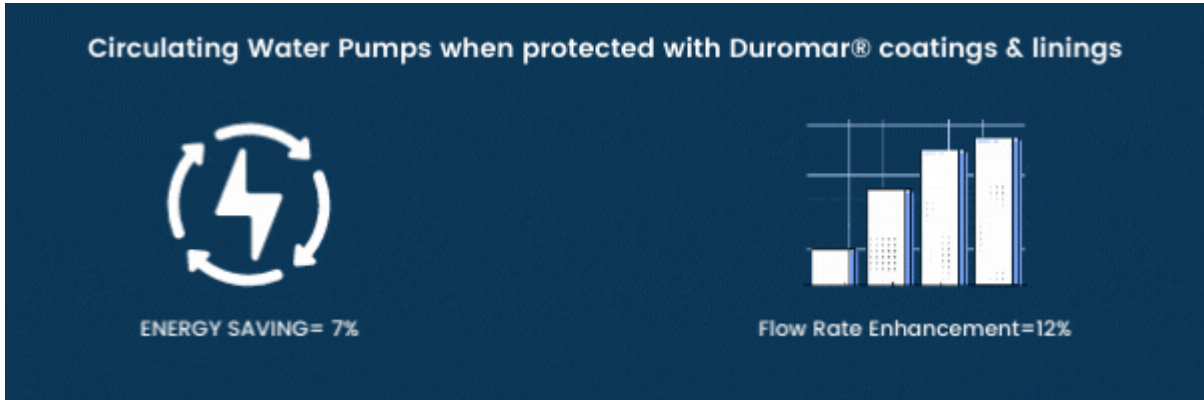

Pump components are often exposed to the threat of extreme corrosion & erosion over the life of their operation.

With aggravating corrosion & erosion, integral pump components such as the casing, impellers & shafts experience severe metal loss and pitting - which causes the flow rates and energy efficiency of the pumps drop drastically and hence hampering the overall operating efficiency of the asset.

Duromar® range of 100% solid (Zero VOC) epoxy coatings & linings are a simple and cost effective repair system that helps restore the original profile of the pump components whilst preventing these valuable assets from foreseeable corrosion & erosion damages for years to come.

Protecting pumps with Duromar® coating systems also have an added advantage of saving energy consumption and enhancing flow rate of the pumps!

Duromar® coatings are custom designed to help solve aggressive corrosion & erosion issues across pumps handling a range of fluids & slurry with varying levels of pH.

Arudra - in technical collaboration with **Duromar Inc (USA)** - www.duromar.com - is a licensed manufacturer & applicator of **Duromar®** epoxy coating & lining products.
